//note="lst strand cDNA was primed with a NotI-oligo(dT)
primer. Five prime end enriched, double-strand cDNA was
digested with Not I and cloned into the Not I and EcoR V
sites of the pCMVSPORT 6 vector. Library was normalized.
Library was constructed by Life Technologies, a division of Invitrogen. This sequence belongs to sequence cluster 7307.r For more information about this cluster, see http://www.genoscope.rns.fr/

/khof; cDNA made by oligo-dr priming. Directionally cloned into EcoRI/KhoI sites using the following 5' adaptor: GGCACGAG(G). Library constructed by Ling Hong in the laboratory of Gerald M. Rubin (University of California, Berkeley) using ZAP-cDNA synthesis kit (Stratagene) and Superscript I RT (Life Technologies). Note: this is a NIH_MGC Library."

New polynucleotide and polypeptides, useful for treatment and diagnosis of Alzheimer's Parkinson's, Huntington's, amylotrophic lateral sclerosis, immune deficiencies, cancer, autoimmune disorders, multiple sclerosis, diabetes and allergies.

Claim 20; SEQ ID NO 319; 284pp + Sequence Listing; English.

The invention relates to an isolated polynucleotide (I) comprising one of 245 sequences (ABQ93288-ABQ93532). Treating a condition comprising administering to a mammalian subject a composition comprising the protein (II) encoded by (I) (ABP62809-ABP63053) or an antibody (III) to (II). (I), (II) and (III) are useful for diagnostic evaluation of disorders (I) is useful for gene therapy of diseases and (II) can be used for

The invention relates to human Ras-like protein and its corresponding nucleic acid. The Ras-like protein and DNA is useful in the development of nucleic acid. The Ras-like protein and DNA is useful in the development of human therapeutics and diagnostic compositions. They are useful in the diagnosis, prevention and disorders associated with cell proliferation and apoptosis, e.g. AIDS and other inflectious or genetic immunodeficiencies, neurodegenerative disease e.g. Alzheimer's disease, Parkinson's disease, wasting diseases e.g. cachexia, circhaemic injuries e.g. myocardial infarction, stroke or repertusion injury, toxin-induced diseases such as alcohol-induced liver damage or cirrhosis, osteoporosis or cancer. They are also used to treat disorders associated with inflammation including allergies, atopic dermatitis, atherosclerosis, asthma, anaemia, Crohn's disease, diabetes mellitus, casociated with inflammation including allergies, disease, glomentulomephritis, gout, irritable benel syndrome, clupus erythematosus, multiple sclerosis, sosteoarthritis, pandreme, untiple sclerosis, osteoarthritis, pandreme, cuestis, trauma, or viral, bacterial, fungal, parasitic, protozoal or halminthic infections. The antibodies of the invention are useful in the pharmacognomic analysis or for tissue typing. The transgenic animals are cueful for studying the function of a Ras-like protein is used in drug screening assays and its activity. Ras-like protein is used in care therapy. The present cycle sequence is human Ras-like protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  61 IWDTAGOERYOTITKOYYRRAQGIFLVYDISSERSYQHIMKWVSDVDEYAPEGVQKILIG 120

The invention relates to an isolated polypeptide. The polypeptide is useful for diagnosing a pathological condition or a susceptibility to a pathological subject, by determining the presence or amount of expression of the polypeptide in a biological sample and diagnosing a pathological condition or a susceptibility to a pathological condition based on the presence or amount of expression of the condition based on the presence or amount of expression of the condition based on the presence or amount of expression of the condition based on the presence or amount of expression of the condition of a binding partner to the polypeptide is also useful for identifying a binding partner of effects an activity of the polypeptide. The polypeptide or the mucleic acid encoding the polypeptide is useful for preventing, treating, or ameliocating a medical condition, which involves administrating the polypeptide or the nucleic acid to a mammalian subject. The nucleic acid is useful for diagnosing a pathological condition or a susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or autoimmune disease, Parkinson's disease, alicosis, gastrointesting a utoimmune disease, atherosclerosis, haemophilia, thrombocytopenta. The polypeptide, the nucleic acid and the antibody are useful as immunosuppressive agents, the profession or a susceptibility antibody and incomment of the susceptibility and as agente to induce the profesor of a susceptibility or the pulpage of a susceptibility or the pulpage of a susc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               present sequence represents the amino acid sequence of a novel human protein. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format direct from USPTO at seqdata.uspto.gov/sequence.html?DocID=20020168711.
                                                                                                                                                                                                                                                                                                                                                                                New isolated polypeptide useful for diagnosing and treating immunosuppressive conditions such as autoimmune disease and Parkinson's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 11; SEQ ID NO 701; 345pp; English.

Leach M; Shimkets RA,

WPI; 2000-602362/57. N-PSDB; AAC75813. Novel nucleic acids and peptides derived from open reading frame X, disorders, useful for treating e.g. cancers, proliferative disorde neurodegenerative disorders and cardiovascular disease.

Claim 11; Page 1979-1980; 5507pp; English.

AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepacotropic; vulnerary; antiporiatic; antiparkinsonian; nootropic; neuroprotective; osteopathic; antiporialit; indunosuppressant; immunosuppressant; immunosuppressant; immunosuppressant; immunosuppressant; immunosuppressant; indunotimulant; cardiant; intrombolytic; coagulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; antiinflammatory; antibacterial; antiviral; antirhenwalic; antiinflammatory; antibacterial; corp. or preventing or treating pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative used to treat cancers, proliferative disorders, neurodegenerative disorders antibuts, hypertension, hypothyroidism, candiovascular disease, diabetes mellitus, hypertension, hypothyroidism, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, nocturnal haemoglobinuria, antiinflammatory disease; to enhance coagulation; to inhibit thrombosis; and as a contraceptive , AIDS, viral, bacterial or fungal infection, malaria, autoimmune

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention discloses a composition comprising two or more isolated rate or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the nucleic acid sequence. Also comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a first to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal cubjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in neuronal tissue of a first animal the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the composition, a polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound or small molecule that regulates the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         NKADEEQKRQVGREQGQQLAKEYGMDFYETSACTNLNIKESFTRLTELVLQAHRKELEGL 180
activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polymuclectide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    09

Ruben SM; Rosen CA, Barash SC, WPI; 2001-465460/50 N-PSDB; AAS27472. Novel polypeptides useful for diagnosing, treating, preventing and/or prognosing disorders related to the proteins, including cancers, immune disorders and neuronal disorders.

Claim 1; SEQ ID NO 1120; 880pp; English.

The invention relates to novel isolated polypeptides (I), and polymuclectides (II). (II) and the antibody to (I) are useful for diagnosing, preventing and treating diseases including immune system disorders (e.g. congenital and acquired immunodeficiencies, autoimmune

WPI; 2003-719985/68 N-PSDB; ADB93640 New isolated polypeptide useful for diagnosing and treating immunosuppressive conditions such as autoimmune disease and Parkinson's disease

Claim 11; SEQ ID NO 1120; 345pp; English

The invention relates to an isolated polypeptide. The polypeptide is useful for diagnosing a pathological condition or a susceptibility to a pathological condition in a subject, by determining the presence or amount of expression of the polypeptide in a biological sample and diagnosing a pathological condition or a susceptibility to a pathological condition based on the presence or amount of expression of the polypeptide is also useful for identifying a binding partner to the polypeptide; which involves contacting the polypeptide with a binding partner and determining whether the binding partner of the polypeptide. The polypeptide or the nucleic acid encoding the polypeptide is useful for preventing, treating, or ameliorating a medical condition, which involves administering the polypeptide is useful for preventing the polypeptide or the nucleic acid to a mammalian subject. The nucleic acid is useful for diagnosing a pathological condition or a susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition continue the presence or absence or the polypeptide are useful for treating

```
disease, atherosclerosis, haemophilia, thrombocytopenia. The polypeptide, the nucleic acid and the antibody are useful as immunosuppressive agents as adjuvants to enhance immune responses, and as agents to induce higher affinity antibodies and increase serum immunoglobulin concentrations. The protein. Note: The sequence data for this patent did not form part of printed specification but was obtained in electronic format direct from USPTO at seqdata.uspto.gov/sequence.thml?DocID=20020168711.
                                                                                                                                                                                                                                                     ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLiG176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention discloses a composition comprising two or more isolated or human polynucleotides or a polynucleotide which represents a fragmen derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent

that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating the injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene therapy). The sequence presented is a human protein (shown in Table 2 of the sequence data for this patent did not form part of the printed green that was obtained in electronic form directly from WIPO at
increases or decreases the expression of the polynucleotide sequence

Human proteins and DNA encoding sequences useful for preventing, treating or ameliorating a medical condition in a mammalian subject e.g. arthritis N-PSDB; ABA09160 and cancer

Claim 20; Page 276; 1963pp; English.

Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABB10981-ABB12330 represent nucleic acida encoding them. The equences ABA08225-ABA05374 represent nucleic acida encoding them. The chromation also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of detecting the nucleotides or the polypeptides in a sample, and methods of detecting the nucleotides or polypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities and hence potential therapeutic applications. The polypeptides of the invention may have various activities; stem cell growth factor activity; have various activities; stem cell growth factor activity; immunodulatory activity; tissue growth activity; immunodulatory activity; tissue growth activity; immunodulatory activities; stem cell growth activity; immunodulatory activities; and activities, or may be now various activities; ancer cell proliferation or metastasis.

Cc dispetation activities; ancer cell proliferation or metastasis.

Cc chemotratic or chemokhrheit activities, polypeptides and nucleotides of the invention are useful for preventing, treating or ameliocating medical conders, hasmatopoietic disorders (e.g., myabid or lymphoid cell promitions, e.g., by protein or gene therapy. Such conditions include cancers, hasmatopoietic disorders (e.g., myabid or lymphoid cell current is ischaemia, bone disorders (e.g., myabid or lymphoid cell cancers, hasmatopoietic disorders (e.g., myabid or lymphoid coll current is ischaemia, bone disorders (e.g., myabid or lymphoid coll cancers, hasmatopoietic disorders (e.g., myabid or lymphoid coll cancers, hasmatopoietic disorders (e.g., myabid or lymphoid coll cancers, hasmatopoietic sincerollers), and abnormal creativity er ethinopathy, atherosolerosis, concerns, hasmatopoietic disorders (e.g., myabid or lymphoid e.g., of burns, inclains and ulcers), while those with growth. For example, such polypeptides may be used

further be used for gene therapy, chromosome mapping, in the identification of individuals and in forenaic analysis, and the polypeptides may be used as food additives or to prepare antibodies useful in disease diagnosis, drug targeting and phenotyping. The present sequence represents a human ovarian antigen of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                  Sequence 221 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               29-JAN-2004
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   27-FEB-2003.

caimed are a vector comprising the novel polymucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polymucleotide sequence that increases or decreases the expression of the polymucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polymucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound or small molecule that regulates the extra polymucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the activity in an animal of one or more of the polypeptides given in the pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polymucleotide or the compound that animal seamental news in the preparing a medicament for treating a medicament for treating a medicament for treating a medicament for treating a medicament for preparing a medicament for treating a medicament for treating animal seamental seamental trainer of the polymucleotide or the compound that and a pharmaceutical promposition comprising a medicament for treating and animal seamental seamental for preparing a medicament for treating animal composition of the polymore.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               61 IWDTAGQERYQTITKQYYRRAQGIFLVYDISSERSYQHIMKWVSDVDEYAPEGVQKILIG 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NKADEBOKROVGREGGOQLAKEYGMDFYETSACTNLNIKESFTRLTELVLQAHRKELEGL 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene therapy). The sequence presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

The invention discloses a composition comprising two or more isolated rat or human polynuclectides or a polynuclectide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynuclectide, a host cell comprising the vector is method for identifying a nuclectide sequence which is differentially regulated in an animal subjected to pain and a gent that increases or decreases the expression of the polynuclectide sequence that increases or decreases the expression of the polynuclectide sequence that is differentially expressed in neuronal tissue of a first animal composition and polynuclectide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound which regulates the expressed in an animal subjected to pain, a method for pain, a method for identifying a compound that regulates the expression of a polynuclectide sequence which is differentially expressed in an animal of one or more of the polypeptides, a method for producing a pharmaceutical composition, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more of polypeptides or their antibodies. The polynuclectide given in the specification, a method for identifying a medicament for treating pain (e.g. spinal segmental nerve injury (SNI)) in an animal (e.g. spinal sequence presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: the specification) but was obtained in electronic form directly from WIPO at seminors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ë
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 IWDTAGQERYQTITKQYYRRAQGIFLVYDISSERSYQHIMKWVSDVDEYAPEGVQKILIG 120

associated proteins represented in AABS8106 - AABS848. Lung cancer associated proteins and polynucleoride sequences, their agonists, and antagonists may have neuroprotective; cytostatic; cardioactive; cardioactive; cardioactive; immunomodulatory; muscular active general; vulnerary; gastrointestinal general; nephrotropic; antiinfective; gynecological; or antibacterial cativity. The invention also includes antibodies specific for the protein or polynucleotide sequences. The lung cancer associated polynucleotide sequences. The protein of lung cancer, chromosome captured in as chromosome markers, and for numerous other diagnostic or research purposes. The proteins may be used to treat diagnostic cardiovascular, renal, and proliferative disorders. The proteins may also cardiovascular, renal, and proliferative disorders. The proteins may also be used in the treatment of wounds and infectious diseases. Polynucleotide sequences AAF18435 and peptide AABS849 are used in the course of the invention for the identification and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           44 MAKAYDHLFKLLLIGDSGVGKTCLIRFAEDNFNNTYISTIGIDFKIRTVDIGGKKIKLQ 103

                                                                                                                                                                                                                                                                                                                                                                                                        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence

TITLE OF INVENTION: ISOLATED HUMAN RAS-LIKE PROTEINS,

TITLE OF INVENTION: NUCLEIC ACID MOLECULES ENCODING THESE HUMAN RAS-LIKE

TITLE OF INVENTION: NUCLEIC ACID MOLECULES ENCODING THESE HUMAN RAS-LIKE

TITLE OF INVENTION: NUMBER: US/09/817,198A

CURRENT APPLICATION NUMBER: US/09/817,198A

CURRENT FILE OF ESEQ ID NOS: 33

SOFTWARE: FastSEQ for Windows Version 4.0

TYPE: PRT

TYPE: PRT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        61 IWDTAGGERYQTITKQYYRRAQGIFLVYDISSERSYQHIMKWVSDVDEYAPEGVQKILIG 120
